

AIDUCATION LIMITED

AIDUCATION AI MANDARIN READING ASSESSMENT

# AI Mandarin Reading Assessment

A browser-based assessment-to-action system that turns spoken Mandarin evidence into targeted learner practice and teacher-visible next steps.

K-12

B2B FOR SCHOOLS

WORKING BROWSER MVP

GES Awards 2026 APPLICATION

## LEARNER

## EVIDENCE

Illustrative learner records and scores are synthetic demo data.

From every spoken character to the next teaching action.

aiducation.asia | official@aiducation.asia

01 | THE PROBLEM

# One score conceals the intervention.

Mandarin reading difficulty can originate at several distinct levels, but classroom feedback is often too coarse.

1

## HIDDEN DIAGNOSIS

A total score cannot show whether the next need is character recognition, an initial or final, tone, rhythm, or fluency.

2

## UNSUSTAINABLE REVIEW

Teachers cannot repeatedly replay every recording and manually convert speech evidence into individual practice.

3

## DISCONNECTED TOOLS

Generic language apps drift from the class text and rarely return interpretable class-level patterns to the teacher.

The unmet need is not another score. It is an inspectable path from evidence to action.

02 | THE WORKFLOW

# A complete learning loop, line by line.

No specialist hardware. No generic prompt box. Each screen advances one clear classroom task.

01 LISTEN

Curriculum-aligned model

02 RECORD

One line at a time

03 DIAGNOSE

Character to fluency

04 ACT

Teacher-visible patterns

AI organises evidence and possible next steps. The teacher reviews, corrects and decides.

03 | WHY AIDUCATION

# Beyond the score. Beyond the chatbot.

The differentiator is the orchestration: diagnosis, practice, cultural context and teacher action remain connected.

DIAGNOSE

## Expose the error behind the score

Character, phoneme, tone and fluency signals pinpoint what to practise next.

COACH

## Turn evidence into repeatable action

Diagnostic patterns become specific correction cues, audio feedback and targeted practice.

CONTEXT

## Keep language connected to meaning

Dialogue and progressive ink-wash scenes connect pronunciation, vocabulary and culture.

**Designed around the curriculum text being taught, not around a general-purpose conversation.**

04 | EVIDENCE AT THE RIGHT LEVEL

# Ready for a disciplined pilot, without inflated claims.

Four evidence layers distinguish the working product, market signals, research lineage and next validation gate.

WORKING TODAY

Line-by-line learner flow  
Interpretable report and practice  
Teacher-visible class patterns

LOW-FRICTION DELIVERY

Browser on existing devices  
Curriculum-linked workflow  
No specialist hardware

NEXT EVIDENCE GATE

Consented school pilot  
Reliability and task completion  
Teacher-AI agreement and feedback

Evidence boundary: procurement engagement is not an award, contract or revenue; predecessor research is not current-product impact; all displayed learner data are synthetic.

05 | A FOCUSED GROWTH PATH

# Start narrow. Reuse the engine. Expand after proof.

A school-first route keeps the initial market specific while the underlying assessment-to-action core remains reusable.

Roadmap items are future plans contingent on pilot validation; no contract, revenue or deployment claim is made.

## 06 | EXECUTION CAPABILITY

# Four disciplines. One execution team.

**Fan Yijun****FOUNDER AND DIRECTOR**

Education, research and institutional engagement

**Jin Mengyao****CURRICULUM + ASSESSMENT**

Chinese e-learning, curriculum and assessment expertise

**Tsang Cheuk Lam****CLASSROOM + LEARNING DESIGN**

Hong Kong secondary-school teacher and learning designer

**Ning Yangtian****TECHNICAL DIRECTOR**

Full-stack hardware, web and AI systems engineering

**CONSENT**

Agree governance, privacy and pilot scope with a school

**VALIDATE**

Measure reliability, task completion and teacher-AI agreement

**ITERATE**

Use teacher and learner feedback to prioritise the next release
